

Electromagnetic process lock

Magne

Magne is an electromagnetic process lock intended for locking doors and hatches.

Magne is usually used to prevent unwanted process interruptions, e.g. during a welding operation.

Magne models with integrated Adam safety sensor make it easy to achieve the highest safety level for the interlocking function.

Reliable in extreme conditions

Sealed aluminium housing

IP67 sealing makes Magne suitable for harsh environments.

Robust design

The electromagnetic lock without mechanical moving parts is a robust design with fewer parts that are subject to wear.

Hygienic design

Flat surfaces without cavities or screws sticking out minimize the risk of accumulating dirt on the surface.

Easy to install

M12 connectors

Quick and easy cabling with M12 connectors.

Magnets simplify installation

Electromagnets offer larger mounting tolerances than mechanical locks.

Continuous operation

LED diagnostics

Integrated LED diagnostics reduce down time when troubleshooting.

Strong holding force

A holding force of up to 1500 N prevents unwanted process stops.

Applications and features

Magne

Applications

Protect the process

Magne 4 is a process lock, with a safe interlocking function. This means that the interlocking function reaches PL e/SIL3 but the unlocking signal is not a safe signal. A typical application is to prevent unintentional/unnecessary interruptions of a sensitive process when the dangerous movement has a very short stop time.

Magne 3 is a simple lock without any interlocking function/safety function.

Harsh environments

With a hygienic enclosure in anodized aluminum and IP67 protection class, Magne is well suited for harsh environments.

Features

PL e in a simple and cost effective way

Magne 4 has an integrated Adam sensor. Models are available with either Adam DYN or Adam OSSD. Eva General code or Eva Unique code is ordered separately. The use of the Eden safety sensor makes it easy to reach PL e/SIL3 for the interlocking function, and enables serial connection of several Magne 4 locks to the Pluto safety PLC using only one input for Eden DYN and two for Eden OSSD. Tina 12A can be used for the serial connection of two Magne 4 locks in order to simplify connection, reduce cabling and risk of connection errors.

Optional permanent magnet

Anchor plates for Magne are ordered separately and are available with or without permanent magnet. A permanent magnet holds the door closed when Magne is unlocked, or if there is a power loss. Without the permanent magnet, Magne has no magnetic field when unlocked, which avoids the accumulation of metallic particles on the magnet.

M12 connectors

Since the Adam sensor is integrated in Magne 4, the amount of cables is reduced so that only one cable is necessary for both the locking of Magne and the interlocking with Eden. The M12 connectors speed up connection and reduce the risk of connection errors.

Status indication

Most models offer an info signal indicating whether the Magne is locked or not, which simplifies troubleshooting and improves user friendliness.

Locking and interlocking

An interlocking function indicates if a door is open or closed and prevents movement when the door is open. But it does not prevent the door from being opened. A locking function makes sure the door is kept closed.

Ordering details

For a complete Magne lock both door part and frame part is necessary. Magne 4 also requires a separate Eva sensor.

Safe interlocking with integrated Adam	Safety signal	Extra function	Connector	Type	Order code
